

*Model #6000-EXT
Extender Kit for #6000 Inpool ladder*

Parts List

2 - Long Extension Boot

4 - 1/4-20 x 2" Bolt

4 - 1/4" Nylon Acorn Nut

1 - Upper Tread

Note: For missing or replacement parts, please visit our website at www.conferladders.com.

The Extension Boots are installed onto the bottom ends of the ladder legs. They will raise the ladder to an approximate height of 68".

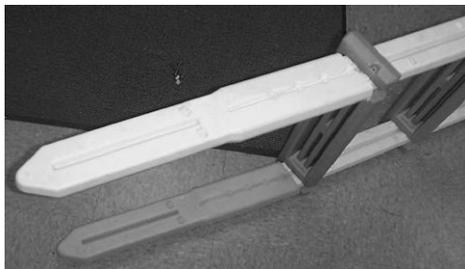

1. Remove the bottom tread if it has been installed.

2. Using a hacksaw cut off the small nubs on the sides of the stringers that were holding the bottom tread in place. This will make it easier to slip the extension boots onto the ends of the ladder legs.

3. Slide the two extension boots onto the ends of the ladder legs so that the top angles of the extension boots match the underside angles of the tread. Push the extension boots on until they are fully engaged.

Extender Kit for #6000 Inpool ladder

4. Drill two 5/16" holes all the way through each extension boot and fasten with the 1/4-20 x 2" bolts and acorn nuts. Drill one hole near the top of the sleeve section of the boot and the second hole near the bottom of the sleeve section.

5. Reattach the bottom tread to the ends of the extension boots.

6. Attach the upper tread included with this kit to the extension boots using two #10 x 1-1/2" screws left over from the assembly of the ladder.
